## AIMS AND SCOPE

The *Annual Review of Addictions Research and Treatment* is a series of edited volumes designed to both summarize and put into historical and scientific perspective the developing field of alcohol and other drug studies. Presenting in their original form some of the most important recent contributions to the field's expanding literature, the *Annual Review* will also serve as a focus of informed debate by commentators and reviewers, each a leading authority. In turn, the editors will help guide the debate by comparing and contrasting the positions of a range of invited contributors, in order to point the way, to the extent possible, for future developments in the field.

The *Annual Review* is designed to serve an integrative function. To this end, it aims for a broad-based readership, consisting of researchers, clinicians, administrators, policymakers, legal professionals, and others interested in this vital emerging field. The editors anticipate that the *Annual Review* will keep these readers current with their own areas of special interest, as well as with developments in those areas that can inform their work.

Broad domains which effectively encompass the field of addictions research and intervention will be authoritatively surveyed, commented on, and updated in each volume of the *Annual Review*. These domains include pathophysiology, behavioral pathology, etiology, emergent treatment concepts and techniques, program evaluation and treatment outcome, prevention, epidemiology and population studies, policy research and initiatives, the lay treatment community, and others. Each section will contain an extensive review of the current literature prepared by a knowledgeable reviewer. The review will be accompanied by several especially valuable reprinted manuscripts published during the past year or two. The section will conclude with one or two brief commentaries, also written by knowledgeable authors, which are designed to offer the reader complementary or contrasting views. By these means the editors hope to produce a unique annual archive of wide scope, critical depth, taut scholarship, and broad readability.
